

SIMATS ENGINEERING (SAVEETHA SCHOOL OF ENGINEERING)

Department of Computer Science and Engineering

ASSESSMENT TOOL 3 – INDIVIDUAL TALK

Course Code:	ITA03	Course Title:	Mobile computing
CO Assessed:	CO1	Assessment:	Assessment Tool 3 – INDIVIDUAL TALK
Weightage:	30 % of CIA	Total Marks:	20 marks
CO1 Statement:	Analyse the mobile network components, mobile base station, mobile infrastructures and protocols in cellular systems.		
Student Name:	P.Ranjithkumar	Reg. No.:	192411119
Section / Batch:	2024	Date:	02.10.2026

Code of Conduct

I P.Ranjithkumar (192411119)_____ (Name / Reg. No) certify that this submission is my original work and that I have adhered to the guidelines specified for this assessment. I understand that any violation of academic integrity rules will result in disciplinary action.

Signature of the Student: P.Ranjithkumar_____

Instructions

- Topic given before the session and students speak on stage.
- Duration: 10 minutes (In class)

Faculty In-charge	Course Coordinator	Program Director
Signature: _____	Signature: _____	Signature: _____
Date: _____	Date: _____	Date: _____

1. Quality of Service (QoS) in Mobile Networks

Quality of Service in Mobile Networks

Definition

Quality of Service (QoS) in mobile networks means how well a mobile network provides services to its users. It ensures good call quality, fast internet speed, reliable connectivity and better performance of mobile applications.

Better Service for You

Key Factors Affecting QoS

1 Signal Strength

- Strong signal → clear calls & good internet.
- Weak signal → call drops & slow speed.

2 Network Speed

- Helps in streaming, downloading, social media and online classes.

3 Latency

- Delay between sending and receiving data.
- Low latency is vital for video calls, gaming and real-time applications.

4 Network Coverage

- Good coverage in cities, villages, highways and indoor areas.
- Poor coverage causes call drops and slow internet.

5 Number of Users

- More users → network congestion.
- Can reduce internet speed and call quality.

Example

During a festival or at a crowded stadium, thousands of people use their mobile phones at the same time. This can cause slow internet, poor call quality and network congestion.

Uses / Benefits of Good QoS

Clear voice calls

Smooth video calls

Better streaming experience

Supports online education & work

Safe mobile banking & transactions

Helps in emergency communication

Conclusion

So, **Quality of Service** is very important in mobile networks. **Strong signal, good speed, low latency, wide coverage** and **reliable connectivity** help us get better mobile services and a smooth user experience.

*Better Network
Better Tomorrow* 

 Connect • Communicate • Grow
